STAPLE FIBERS
Wipes, FemCare, Diapers
STAPLE FIBERS

The challenge

Finding the best balance between processability, drawing ability and fiber properties.

Total’s answer....

Total PPH 7059 : a reference for the hygiene market

PPH 7059 is a Ziegler-Natta PP homopolymer with a MFI of 13 g/10’. It is a reference raw material for the hygiene nonwoven market and is ideally designed for the production of fine dtex staple fibers according to the long spin process. It features outstanding quality consistency, very low gel level, and is perfectly adapted for the production of fibers intended for calender bonded nonwovens. It may also be considered for spunlace nonwovens, as core of bicomponent fibers, for trilobal fibers, etc.
