# SILAGE COVER

Processability and mechanical properties

# SILAGE COVER

## Opportunities & challenges

Silage covers need to provide the right environment to the protected foodstuff in order to ensure the correct fermentation process and conservation. This results in **demanding requirements** for mechanical and barrier properties.

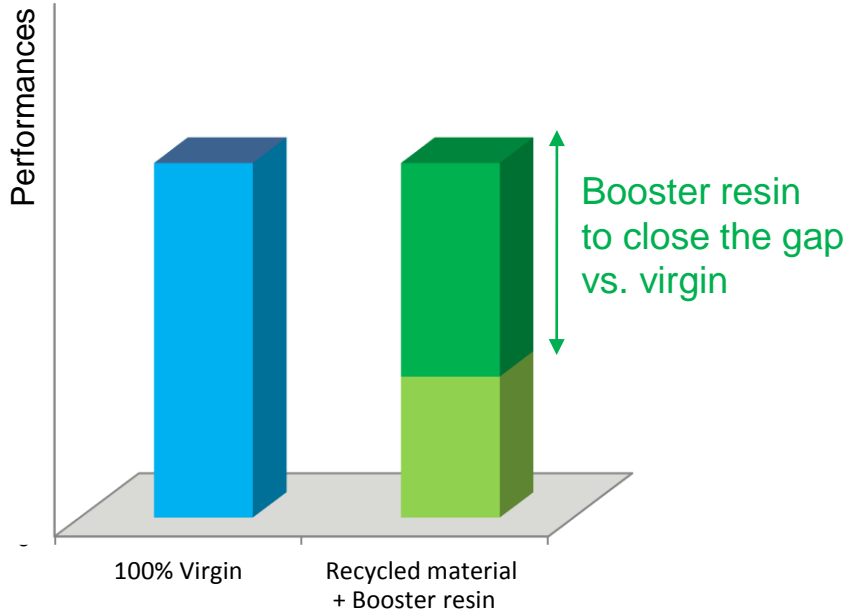

Therefore it is important to be able to offer products helping you meet those demanding requirements by enabling **downgauging** or **use of recycled product** and improving the **mechanical properties**.

## What Total can offer

With their **excellent processability** and **mechanical properties**, our **Lumicene Supertough®** are the ideal partners to simplify your film structures and facilitate your material sourcing. In addition, they offer interesting cost innovation by enabling you to either **downgauge** or increase the amount of **recycled material**.

# WHAT TOTAL CAN OFFER

as **recycled booster** or **downgauging partner**:

- Performance resin for high mechanical properties
- Smooth processing
- Similar handling
